SHORT DESCRIPTION

Course Code: ECA 018

Course Name: Embedded Building blocks using Arduino Hands on for Young

An embedded system is a combination of hardware and software provided that both should be synchronized with each other. Some examples are as follows: industrial machines, automobiles, medical equipment, cameras, household appliances, airplanes, vending machines etc. The Arduino is an open-source computer hardware/software platform for building digital devices and interactive objects that can sense and control the physical world around them.

COURSE OBJECTIVES

- To understand and Knowledge of Processors of embedded Systems
- To learn how the Arduino platform works in terms of the physical board and libraries and the IDE (Integrated Development Environment)
- To enhance the knowledge about sensors and actuators
- To control Embedded system based devices using Arduino.

COURSE OUTCOMES:

- Make use of Arduino Library and Emulator and Knowledge of Arduino Software
- Learned about Analog, Digital, Power, Other Pins, External/USB power supply, reset button, and other components of Arduino Board
- Working on LCD monitor, Reading Various Sensor data on Serial Monitor and LCD Display.
- Design and implement Analog and Digital Sensors, Pull-Up/Down resistors and Examples of sensors , Connecting different sensors such as: Humidity, Heat/Temperature, proximity, IR, Motion, Accelerometer, Sound , Light, distance, Pressure, Thermal, Infrared, LDR etc. to Arduino Board

SHORT DESCRIPTION

Course Code : EA008

Course Name: Python Programming for Power Electronics

Python Programming for Power Electronics course provides a comprehensive introduction to using Python programming language for power electronics applications. This will help to learn the fundamentals of Python programming, including syntax, data structures, and control flow, and explore how to apply these concepts to solve problems specific to power electronics engineering. Through hands-on exercises, students will gain proficiency in utilizing Python libraries such as NumPy, SciPy, and Pandas for scientific computing, data analysis, and visualization.

COURSE OBJECTIVES

- To understand the core concepts of Python programming language, including variables, data types, control structures, functions, and modules
- To learn and utilize Python libraries such as NumPy, SciPy, and Pandas for numerical computing, scientific analysis, and data manipulation tasks relevant to power electronics
- To develop the ability to simulate power electronics circuits and analyze their behavior using Python, integrating with simulation tools like SPICE for comprehensive design and analysis
- To gain proficiency in developing and implementing control algorithms in Python to regulate and optimize the performance of power electronic systems, including closed-loop control strategies
- To explore various optimization techniques and apply them to power electronics design challenges, enhancing system efficiency, performance, and robustness

SHORT DESCRIPTION

Course Code: MEW005

Course Name: CATIA

CATIA is the reduced form of Computer Aided Three-Dimensional Interactive Application developed by French company Dassault Systems and marketed worldwide by IBM. It is a complete multi-platform solution for Computer-Aided Design (CAD), Computer-Aided Manufacturing (CAM), Computer-Aided Engineering (CAE), PLM and 3D.

CATIA is product design software, which is ideal for surfaces, creating solids, drawings, assemblies, fabrication and analysis. This software is used in multiple industries like in manufacturing industries, automobile, aerospace, etc. to visualize designs in 3D. These industries use CATIA to model any product, to integrate 3D features with 2D tools and to develop 2D drawing views

COURSE OBJECTIVES

Create three-dimensional assemblies incorporating multiple solid models. Apply industry standards in the preparation of technical mechanical drawings.

- Use their capacity of vision to interpret and/or convey the technical information in an industrial drawing.
- Know and be able to apply graphical representation techniques using traditional metric geometry and descriptive geometry methods.
- Know, identify, interpret and apply the current standards on Industrial Technical Drawing.
- Computer aided design applications that allow students to elaborate and use graphical and technical information.
