Session Day 1

The session started with the speaker **Mrs. P. SHOBANA PRITHA**. She started the brief introduction about AI and the way through which the AI evolved in the World. She also explained about the communication between the AI and the Human Brain and the way through which the functions of AI works. She also discussed about the interaction of AI which evolves the human brain to do things like, Human to think like Human beings etc.

She said that, the ability of a digital computer or computer-controlled robot to perform tasks commonly associated with intelligent beings and the term is frequently applied to the project of developing systems endowed with the intellectual processes characteristic of humans, such as the ability to reason, discover meaning, generalize, or learn from past experience.

She end the day 1 session by saying “Anything that could give rise to smarter-than-human intelligence - in the form of Artificial Intelligence, brain-computer interfaces, or neuroscience-based human intelligence enhancement-wins hands down beyond contest as doing the most to change the world. Nothing else is even in the same league.”

Session Day 2

Hands on Training

Students started to learn the AI through hand practice mode, Trainer thought the students to develop a game using the AI domain which will contains the Multiplayer or playing with the Computer itself.

Block Game

Trainer had given the colour combination blocks game and they asked the students to change the colour of the blocks and also they asked students to change the coding for the shapes and to set background for the game.

Planet Simulation Game

Trainer had given planet simulation game where the planets revolve around the sun, and they asked the students to change the Coding's for the colour of the planets revolution, set background for the game, and also asked to change the code, so that when the students touches the screen it would show the planets Latitude and Longitude.

Session Day 3

Trainer had given coding's to students which are related to games and asked them to do the changes in the coding so that they can get deep learning in the AI coding's.

Trainer had given Ludo game basic coding and they asked the students to creating the board, moving the buttons, they also to change the colours of the board, buttons , movement etc.

Session Day 4

On day 4, the trainer said about what are the different types of AI such as General AI, Narrow AI and Strong AI.

She said to the students about the differences. Narrow AI is programmed to operate within a set of pre-defined functions to complete or address a specific problem. Strong AI will have a mind of its own and will be able to accomplish any type of task that its 'mind' can envision.

She also said, while narrow AI refers to where artificial intelligence has reached today, general AI refers to where it will be in the future. Also known as artificial general intelligence (AGI) and strong AI, general artificial intelligence is a type of AI that can think and function just as humans do.

Session Day 5

Trainer said that to the students, by discussing various applications and the technologies of the AI, students had done some hands on practice programs such as games, quiz, and so on. Students also done many more projects for a whole day such as currency converter, password manager, path finder, nba score, solar system etc....
